

Cherrywork Default Landing Page

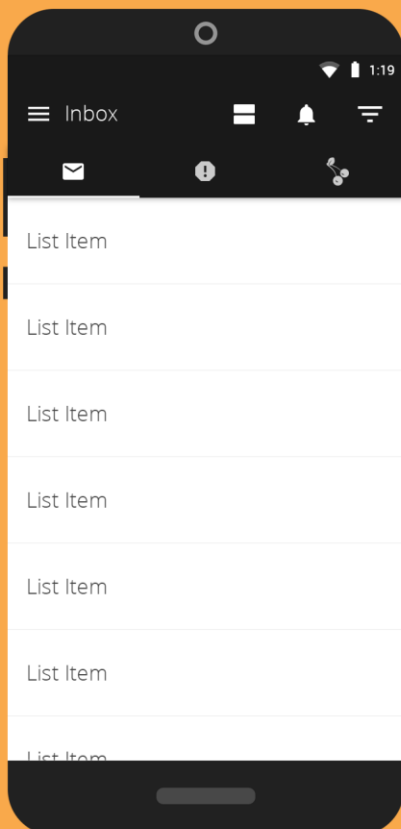

- A. The hamburger icon is for the side nav. This is the general side navigation menu, the list items appearing here do not change with the context, or tabs.
- B. The filter icon brings up a right to left menu which acts as a filter. The list items appearing in this menu will vary according to the context of the screen from which it is called.
For example, Inbox can have tasks & feeds originating from several cherries, this filter icon enables us to filter them on the basis of the originating cherry.
- C. It is the notification icon that helps you know if you have a notification, and also navigate to the detailed notification screen.
- D. Every screen can have more than one views, this icon allows the user to switch between different views for a screen.
- E. These icons are for the three modules (represented by tabs), inbox, reports and cherries, respectively.

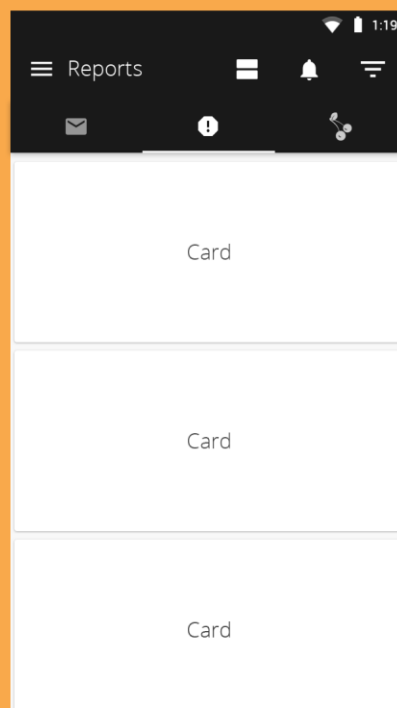

Inbox

Reports

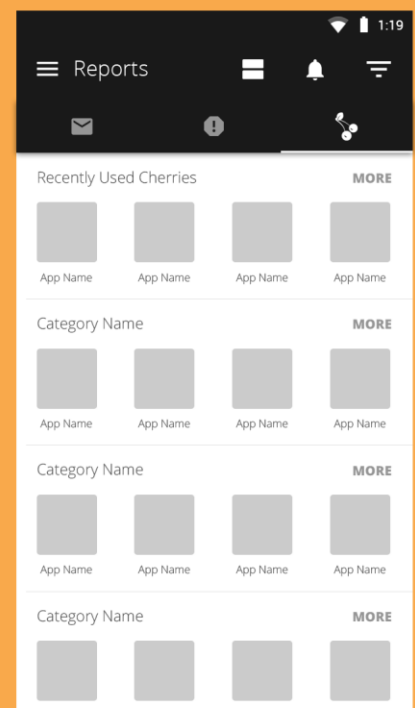

Cherries

Inbox is where the collection of feeds and tasks originating from all the cherries are shown. The default view for inbox is list view.

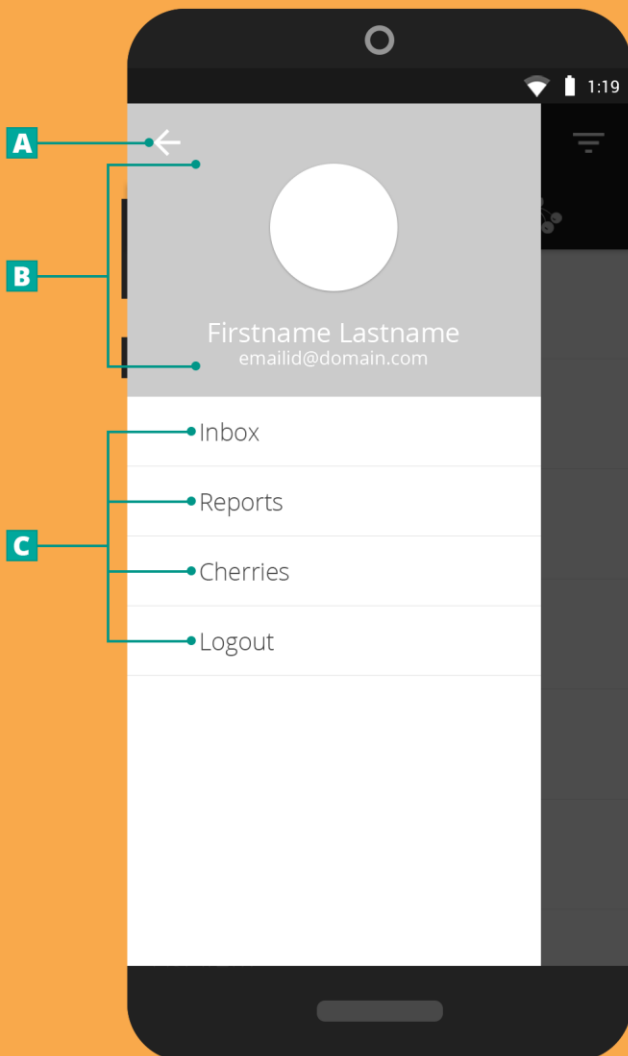

Reports is where all the reports originating from all the cherries are shown. The default view for reports is card view.

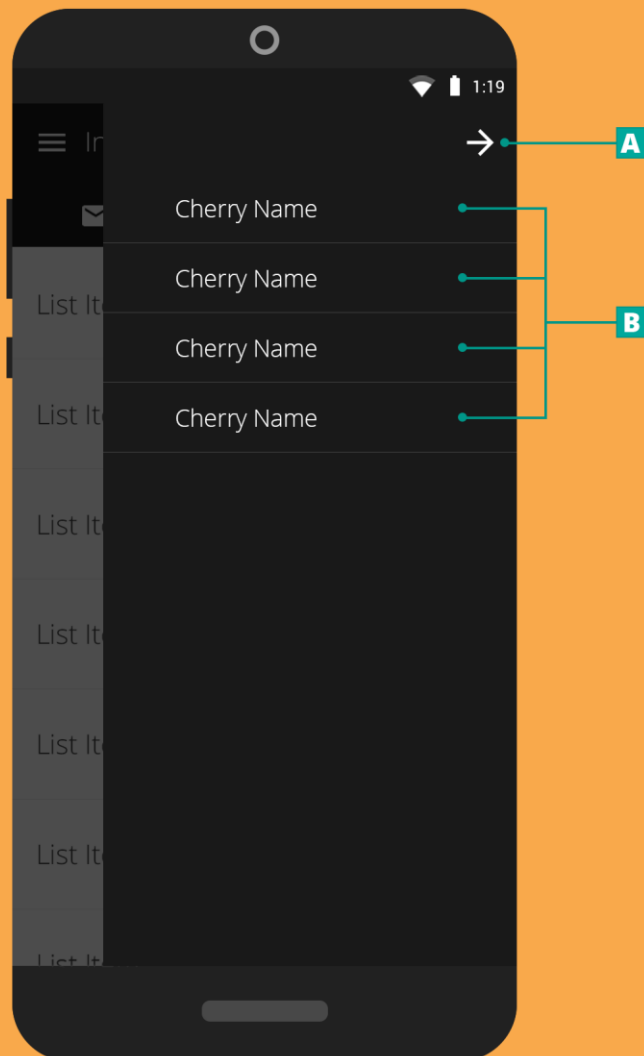

Cherries is a dashboard for all the cherries, divided by categories.

Navigation Menu

- A. This is the back button. Pressing this will remove the side navigation menu and take the user back to the current screen.
- B. This area is for the logged in user. It contains the picture, name and email id of the user. Pressing on the picture or the name takes the user to the profile settings screen, where he can configure the setting for his/her profile.
- C. Every option in the side navigation menu lets you navigate to one of the modules (tabs). Apart from this, the option "Logout" allows the user to log out of the app at any point of time. The options in this menu do not change with the context, and will remain the same for every screen.

Filters

- A. This is the back button. Pressing this will remove the filter menu and take the user back to the current screen.
- B. These are the filters for filtering the data the user is viewing on the screen that the user is currently on. These filters are basically names of the cherries. By default, every module (feeds, tasks, and reports) has data originating from all the cherries. According to the selection by the user, the current module or screen will be filtered. In the case of cherries, these filters will be the categories the cherries are divided into.
